Hi Supervisors,

Great! Looks like all those city water tanks we thought were just sitting there, a blot on the landscape, might be useful after all.

However, I think that this is a good opportunity, as long as you are creating "a plan demonstrating the potential drought and water shortage risk and proposed interim and long-term solutions for state small water systems and domestic wells within the county. You should include the entire County and not just 4 underserved areas in 2 cities.

Mother Nature does not discriminate when it comes to weather. Fallbrook and Lakeside might be minimally affected by rainfall while other places are drenched. Look at the rainfall map. The County is too big to play these equity games of yours.

For that reason, I oppose your implementation plan, 2 areas for drought planning is not enough and is discriminatory. We all need water.

Regards,

Paul Henkin
