In these days of changing technology, a contract for 6 years as recommended may lock us into a provider who can't get a better technology if and when it becomes standard.

The November report said that 'the County's IT services are stable: systems are reliable and there are no recurring outages or failures;' and 96% of hardware is within support cycles, quite high for a County of this size.

The report says you are strong in WiFi 6 adoption. Speed is nice, but the electronic frequencies cause havoc with medically sensitive people. Caution is advisable.

It says Artificial Intelligence (AI) operations are limited. They should be limited or non-existent.

If your regular info technology is so good, I don't think you need AI. Period. AI is basically the same old algorithms enhanced and run by a machine without a conscience.

You should limit the use of WiFi 6 and make the contact period shorter, maybe 1 or 2 years renewable for 1 year.
