F5SD is an integral part of programs holistically and comprehensively serving children and families. The implementation of Proposition 1 in San Diego must embrace a true continuum of care - starting at birth. Shortsighted focus only on adults will cost the County millions by limiting crucial intervention services to children that lead to future success in school and beyond. I urge you to think about your children and grandchildren and the importance early care and intervention may have had.

Im bringing attention of support being offered for parents and caregivers around developmental delay screenings and treatment for children ages 0-5 .

My client took her soon to his appointment at the behavioral health center . Waited and was never seen ,He needed to be age 2 .

She stated he was 2 when the appointment was made . She was left with no help and or services. This child will enter kindergarten soon .

And he will be behind the class because he and has family was denied treatment .
