The goal of healthy soils is laudable. But failure to oversee policies that are inconsistent in conflict with or undermine this goal will result in wasting that money. County permitted large solar energy projects, battery energy storage facilities and wind turbines remove the most carbon sequestering element, topsoil, is removed. The soil underneath is saturated with herbicides and insecticides killing everything below the project. The chemicals leach into the soil and into our ground water and acquirers. Neither permitted nor unpermitted hemp/marijuana grows are regulated. Neither self report nor a complaint driven process are useful.

I agree with the staff's recommendation to apply and accept grant funds for the healthy soils program.

Another absurd idea.

SOILS project sounds fun. Pretty much what farmers do already. No specifics, but I suspect that the funds would support other things than farming.

If the zero emissions microtransit has anything to do with WAYMO, it needs to be rejected. In Atlanta, WAYMO auto-taxis are shown on video speeding up and down an Atlanta street where children might be playing and also congregating at the end. Whole neighborhood. Specially dangerous to Kids and Seniors, and again, the company is not responsive to this particular situation but just broadcasts a canned message. Do the residents even matter?

Zero Emission EV's are not good either, with their history of spontaneous combustion and sometimes trapping people inside to burn alive. And then EV fires also take longer to put out and prolong wildfires.

If solar, hydrogen, or steam power can be used, that would be good!
