Good report. A few things concern me. Drones (UAS) are certainly useful, but I wonder why so many. I see two old armored cars from 2005 and 8, which may be a bit dangerous to the users even if maintained, just because of wear and tear, and finding or making replacement parts is probably extra-expensive.

I see that you have 6 command and control vehicles dated 2002 to 2013. Are these older vehicles able to keep up with all the new innovations. For instance, does a 2006 vehicle have the type of wiring and resources for 5G communications? Or the latest in video equipment? And is it worth it to have old command centers in constant need of upgrading?
