I strongly support the proposal to enter into negotiations for a contract to bring next-generation sequencing DNA technology to our county's crime lab.

Staying current with the latest advancements in technology is essential to ensuring justice and public safety in our community. This technology has the potential to revolutionize how cases are solved, allowing for more precise and efficient analysis of DNA evidence. With over 350 cold cases, and over 300 sexual assault kits containing at least one unknown DNA profile awaiting resolution, this proposal represents a critical step forward in addressing these challenges.

By equipping our crime lab with next-generation sequencing technology, we open the door to identifying perpetrators, providing closure for victims and their families, and preventing further crimes. This investment is not just about keeping up with technological progress—it's about reaffirming our commitment to justice, accountability, and the safety of our residents.

The report says VEROGEN is the sole vendor capable of establishing performance standards necessary for forensic analysis through validation and providing ongoing instrument support. Sounds wrong. And the report says there are cases which may benefit from Next-Generation Sequencing from VEROGEN. MAY? Alot of people do forensic analysis.
